

# RW Net SDK

*SDK for developing routing-enabled applications*

## Available as:

- Active-X: MS Visual Basic, MS Visual C++, ArcGIS 8 / 9 etc.
- 32-bit DLL: MapInfo/MapBasic and ArcView 3/Avenue.
- .NET 1.1 and 2.0 assembly: C#, VB.NET etc.
- VCL: Borland Delphi 5-7, 2005-2007

## Features:

- Work with large networks (0-500,000 links)
- Work with very large networks (0-16,000,000 links)\*
- Any coordinate system (geographic / projected)
- Shortest / fastest route
- Multi-mode routing
- One-way restrictions
- Turn restrictions
- Calculate route based on weight / height / width of vehicle
- Dynamic segmentation
- Driving directions
- Travelling salesman optimization (symmetric / asymmetric\*)
- Nearest facility
- Z-levels
- Multi-level drive time polygons
- Service area calculation
- Several topological checks of network structure\*
- Hierarchical routing \*
- Encryption\*
- and much more

\* Pro version only.

Import formats: SHP, MIF or TAB.

Output formats: SHP, MIF, TAB, KML or GML.

## Price:

1000 Euro for Standard version, 1 developer

2000 Euro for Pro version, 1 developer

This includes support and all updates for 1 year.

See web site for further price and license details.
